Experience

Imagix Dental / Orthodontic Assistant
MARCH 2025 - PRESENT, SUWANEE, GA

- Use digital dental technology, patient records, imaging workflows, and clinical documentation in a fast-paced healthcare setting.
 - Communicate technical and treatment information clearly to patients and team members.
 - Troubleshoot workflow issues involving equipment, scheduling, documentation, and patient-care processes.
 - Maintain accuracy, privacy awareness, and attention to detail while managing patient-related information.
-

Education

Georgia Gwinnett College / Bachelor of Science in Information Technology, Software Development
AUGUST 2021 - MAY 2026, LAWRENCEVILLE, GA

Relevant coursework: Software Development, Database Systems, Web Development, Networking Fundamentals, Systems Analysis, Information Technology Concepts

Certifications

AWS Certified Cloud Practitioner — Amazon Web Services | Issued April 2025

Information Technology Specialist in Cybersecurity — Certiport / Pearson | Issued April 2025

Projects

Device Manager — Personal Device Value Tracker

Personal Project | Next.js, React, TypeScript, Tailwind CSS, GitHub, Vercel

- Built a web app to track personal electronics, gaming devices, and collectibles in one organized dashboard.
- Added device details such as model, storage, edition, condition, purchase price, current estimated value, and notes.
- Created a clean dashboard layout to make it easier to view total collection value and individual device information.
- Designed the project to help compare purchase prices against current resale value for better collection tracking.
- Deployed the application online using Vercel and maintained the project through GitHub.

BabyBlooming — Parenting Tracker Web & Mobile App

Academic Project | Next.js, React, TypeScript, Tailwind CSS, Firebase, Firestore, Capacitor

- Developed a parenting tracker app for managing child profiles, daily logs, and care-related information.
- Integrated Firebase Authentication and Firestore for secure user-based data storage.
- Used real-time database updates to keep dashboard information current across the app.
- Converted the web app into an Android-ready mobile app using Capacitor.

Automated Data Collection & QA Testing Project

Academic Project | Java, Selenium, SQLite, JUnit, XPath

- Built automated Selenium scripts to collect, validate, and store website data in an SQLite database.
- Retrieved listing details including title, price, URL, and retrieval time using XPath selectors.
- Created database checks to confirm new records were added correctly after each test run.
- Applied structured testing practices using JUnit setup, cleanup, and Arrange-Act-Assert formatting.
